Refrigerant		GWP		kgCO <sub>2</sub> eq		675	675	675	675	675	675
Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential ( GWP ) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 675. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 675 times higher than 1 kg of CO <sub>2</sub> , over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.
