XU photo-electric sensors
for packaging, food & beverage

Telemecanique Sensors presents an expanded XU range of application photo-electric sensors to be embedded in automated lines for the packaging market segment.

With their diverse technical characteristics, high performance and smart management capabilities, they are designed to address a wide scope of specific needs.

Food and Beverage

Fast object detection

Sensor family per application

- > Marking detection
- > Very dark object detection
- > Accurate detection
- > Colour object detection, from simple colour to very complex colour sorting

Read the promotional video

Five detection types

Select the perfectly suitable light spot

- > **Blue light**: for low-reflectivity objects, especially dark ones. Blue light short waves mean less penetration, resulting in higher surface reflection.
- > **Red light**: for detecting objects at a long distance and/or transparent objects
- > **Laser light**: to detect very small objects and contrast marks with pinpoint accuracy, even at a long sensing distance
- > **White light**: for simple contrast detection (high contrast), short distances
- > **RGB light**: for more accurate contrast in colour prints

Designed for small spaces in packaging machines

Choose the casing, connection type and size

- > Plastic or metal (1) casing
- > Pre-cabled, with pigtail or connector
- > Compact, miniature, and sub-miniature size

Simple communication with the PLC via Ethernet

Smart devices communicate via IO-Link protocol

- > Install your new IO-Link sensor easily: automatic reading of the device identification file (IODD) and automatic detection of the sensor output mode
- > Automated parameter settings: configure the detection parameters
- > Extended diagnostics, with real-time information for optimised usage and maintenance

(1) XUKC only has a metal casing.

Presentation

IO-Link is a point-to-point network communication protocol dedicated to sensors and actuators offering advantages such as increased productivity, simplified integration and reduced inventory.

It enables:

- Simplified connection of sensors and actuators to the upper-level control and monitoring system of an automated line
- Advanced diagnostic functions, through continuous monitoring of critical parameters such as signal quality and sensor status
- Reduced commissioning time due to fewer cables and hot swappable devices
- Integration with third-party devices, thanks to multiple fieldbus protocol support (PROFINET, Ethernet/IP)

Telemecanique Sensors offers a wide choice of IO-Link conformant devices, with various detection systems such as thru-beam, diffuse, polarised reflex, etc.

IO-Link system

An IO-Link system consists of the following components:

- IO-Link Master
- IO-Link devices (sensors, RFID readers, valves, motor starters, I/O modules)
- Cabling
- Engineering tool for integration and configuration of IO-Link devices (Simply Config IO-Link Master software (1))

Description

IO-Link Masters

IO-Link Masters serve to capture digital inputs and outputs being conveyed between the PLC and the IO-Link devices.

Two types of IO-Link Master are available:

- **XZ10M8AM12EY** Ethernet Master, for devices connected to an Ethernet/IP network
- **XZ10M8AM12PY** PROFINET Master, for devices connected to a PROFINET network

An IO-Link Master enables:

- On the sensor side: IODD file management, sensor configuration, port diagnosis
- On the Master side: Master configuration, firmware update, factory reset, Master diagnosis, MQTT setting

Example of installation in line or star topology

Characteristics		
Certifications		cULus
Connection type	Male	Screw threaded and clip.
	Female	Screw threaded. Metal clamping ring.
Cable material	Sheath	PUR
	Conductor insulation	PP
Degree of protection		IP65, IP67, IP69K
Ambient air temperature	Static cable	-35...+90 °C
	Flexing cable	-5...+90 °C
Conductor c.s.a.		3 x 0.34 mm ²
Cable diameter		5.2 mm
Nominal voltage		60 V ~, 45 V ---
Nominal current		4 A
Insulation resistance		> 10 ⁹ Ω
Contact resistance		≤ 5 m Ω
